

Eligibility Case Studies

Participant Handout

1. A woman with insulin-controlled diabetes. Her menstrual periods are irregular.
2. An 18-year-old woman who is very fearful of pelvic exams. Her last vaginal delivery was extremely painful. She reports her periods are regular and she is approximately 16 weeks pregnant by LMP.
3. A woman states that her previous delivery was uncomplicated but by cesarean. She has an ultrasound picture that she brought with her that places her pregnancy at 22 weeks gestation.
4. A woman reports she has had six prior vaginal deliveries and suffers from anemia. She presents with a fetal demise. Her last menstrual period places her at 20 weeks but her exam is consistent with a 15- week sized uterus.
